

# PREHN DENTAL OFFICE

## YOUR NEW DENTURE

Today we inserted your new denture. It will take you awhile to become comfortable with this new appliance. Your speech can sometimes sound different for a few days. It also takes awhile to learn normal chewing and eating habits again. Please use the “special denture brush” to clean the denture surface only. Use a normal toothbrush for your gums and tongue every day. Please take the denture out at night to give your mouth tissues a chance to relax. There may be an adjustment period to settle a new denture in place. Please contact our office to schedule an appointment if necessary.

Please remember most patients can benefit from implant dentistry. If you are not satisfied with retention, please let us tell you more about implants.
