

PREHN DENTAL OFFICE

REMOVABLE PARTIAL INSTRUCTIONS

Today we inserted a new removable partial for you. It may take time to become accustomed to your new partial, especially while talking and eating. Speech difficulties, sore spots and cheek biting are common complaints for a few weeks. Please take your partial out at night and clean it with the “special denture brush” you received. Please pay special attention to your natural teeth with regular brushing and flossing during normal oral care. Adjustments are sometimes necessary. Please call the office for an appointment if a sore spot develops.

Please remember most patients can benefit from implant dentistry. If you are not satisfied with retention or fit, please ask us for information about implants.
